

Yes.

You could start with a small solar 12v backup system for your most important needs when the power is out, such as lighting for the house, charging capabilities for your phone, you could even run a 12v TV off our solar charged battery pack.

Later you could add our Maximiser water saving device to your showers.

Or convert your existing electrical geyser to a solar geyser.

Later when it fits in with budget, add our electricity free Waterlite water heater to your roof, which will run on solar power only. No more geyser costs.

Remember an electric geyser accounts for 40% of most household energy costs.
